

SUPPORT FOR INDUSTRIAL INSURERS & ADJUSTERS

- **Technical Support for Claims Investigations, Risk Analysis, and Litigation**
- **Prompt, Accurate Condition Assessments to Make Effective Decisions**

Because claims investigations generally result from an accident or an unplanned incident, Acuren Inspection is prepared to mobilize and arrive on-site within 24 hours to:

- Assist with the initial investigation
- Determine the extent of the damage
- Determine the suitability of the equipment for continued service
- Define repair/replacement options

We can also participate in defining the root cause of the failure, which typically requires a team consisting of the owner/operator, manufacturer, and other specialists.

We support each investigation with the potential for litigation in mind. We use established procedures to provide complete and accurate documentation.

Since each investigation is unique, we consider your schedule, goals, and purposes when formulating an approach to the investigation so that it best suits your needs.

For each case, Acuren Inspection chooses a select team of technicians, scientists, and engineers. If necessary, we also draw from our outside network of experts in such disciplines as:

- Chemical and process engineering
- Fire cause and origin
- Equipment design
- Environmental science and engineering
- Computational fluid dynamics modeling

The team is supported by Acuren Inspection's fully equipped material science laboratories, where tests can be viewed by all interested parties.

Repeated Claims

Occasionally, repeated claims concerning a particular industrial process or type of component signal the need to evaluate an industry-wide problem. Acuren studies claims histories, compiles information on processes and/or components, and determines the best technical and cost-effective solutions to the problem. We also perform any required laboratory testing or analysis.

Independent Third-Party Laboratory Services

As an independent third-party laboratory, Acuren has performed tens of thousands of formal multi-party investigations, accident investigations, and failure analyses. We provide litigation support to industrial insurers and independent adjusters and legal industries by way of documentation reviews, material evaluations, laboratory testing, technical reporting, and expert witness testimonies.
